

Diverter valve

Three ways – Open center
DDF3

USE AND OPERATION:

3 ways diverter valves is used to divert the flow towards 2 different outlets.

MATERIALS AND FEATURES:

Body: cast iron

Internal parts: hardened and ground steel

Seals: BUNA N standard

Tightness: minor leakage

APPLICATIONS:

Connect P to the pressure flow, A and P to the ports of the hydraulic circuit where flow has to be diverted. With lever in position 1 the flow is connected towards port A; with lever in position 2, the flow is connected towards port B. With lever in central position ports P, A and B are all connected (open centre).
